

25 July 2018

To: Recipients of EP37, 1st ed.

From: Jennifer K. Adams, MT(ASCP), MSHA
Vice President, Standards and Quality

Subject: Correction

This notification is to inform you of corrections made to CLSI document EP37, *Supplemental Tables for Interference Testing in Clinical Chemistry*, 1st ed. The corrections are described below and shown as highlighted and/or stricken text.

Table 2, Testing Concentrations for Endogenous Interferents:

In the first paragraph of the introductory information for Table 2, Table 1 is incorrectly listed. The text was revised to read, "In Table ~~4~~**2**, the test concentration is the endogenous concentration plus the added amount."

In the table, the recommended test concentration for conjugated bilirubin is incorrectly listed as "684 µmol/L." This value was corrected to "475 µmol/L."

Table 2. Testing Concentrations for Endogenous Interferents

Endogenous Potential Interferent	Conventional Units and SI-Derived Units	Conventional to SI Conversion Factor	Recommended Test Concentration*	Endogenous Interferent Reference Interval ¹ , except when indicated otherwise
Bilirubin, conjugated	mg/dL	11.86	40	0-0.2
	µmol/L		684 475	0-2.4

If you require any additional clarification regarding these corrections, please contact CLSI Customer Service (customerservice@clsi.org).

We appreciate your commitment to CLSI and regret any inconvenience.
